## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-22, 24-26, and 28-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Naoki (JP 10-201089). Naoki teaches a power control unit including a voltage adjustment and current regulation components, and a controller (3) that reads data from a consumer appliance's passive memory element (7) and determines a voltage requirement and an amperage tolerance of the consumer appliance. The controller also controls the voltage adjustment (DC voltage supplied) and current regulation (amount of current supplied) components, so as to not supply a voltage that exceeds the amperage tolerance. He also teaches an AC/DC converter. He also teaches a cord that connects the power control unit (1) to a power source (via 25) and the power control unit to a consumer appliance (5 via 24) and comprises an appliance connector (24) to connect to a mating connector (22) of the consumer appliance. He also teaches a positive conductor (15), a ground conductor (16), and a data conductor (19) that is connected to a memory element (7) of the consumer appliance. He also teaches DC power being supplied to the controller (via line 13). He also teaches a detector (4) that detects the connection with the consumer appliance. (Figs. 1 & 2; Abstract; Claim 4; [0018], [0025], [0026])

***Allowable Subject Matter***

3. Claims 23 and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: the references of record, either alone, or in combination, do not teach or suggest at least the limitations of: detecting the connection between the two apparatuses by providing a voltage to a memory element and detecting an impedance current variation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***
